

## Exchange Web Updates for Vista

On Vista there is a problem with sending e-mails from Exchange Web. There is a tool that you need to download and install on your computer before you can do this properly.

First, connect to your Exchange Web and log in. On the bottom left of the browser click the Options button.

Scroll down to the E-Mail Security section and click the download button.

Click Save and save it to the Desktop. Once it's finished downloading click Run and install the S/MIME Control. Once installed, you will be able to send E-mails from Exchange Web in Vista.
